

## FEATURES AND BENEFITS

When you consider buying a new vapor recovery system or retrofitting an old one, remember, it's a 20-30 year investment. Choosing DRYVac™ will make you look like a hero. Here's why:

- You'll save at least 30% of the electric cost of operating the system. Forever! That translates to millions over the life of the system! Millions that translate to profits. You'll be a hero!
- If you're retrofitting to enlarge capacity, DRYVac™ will keep your costs way down! There's no need to pour a new foundation for DRY-Vac™ because the next larger capacity DRYVac™ will fit right on the existing foundation!
- With DRYVac™ you get the latest innovation in carbon technology. That means more capacity, less pressure drop, and most importantly, much longer life! Eliminating just one carbon replacement in the life of the system could save \$50-75,000! You'll be a hero!

AT LAST ...

A DRY VAPOR  
RECOVERY SYSTEM  
THAT WORKS!!

We call it DRYVac™

You may call it ...  
"FANTASTIC" !

Call 1-800-276-7152  
to learn more .

Innovation that works for you!

# DRYVac™

## A New Choice

### ... At Last!

#### SIMPLER IS BETTER

Terminal vapor recovery just got better ... at last! Now, you have a clear choice for the best available control technology. We call it DRYVac™. You may call it “Fantastic”!

You see, our new DRYVac™ systems USE NO GLYCOL! That means they're much simpler, and that much more reliable too. Just imagine ... no glycol to buy, handle, or dispose of. No seal fluid separator with its quirky controls. No glycol pump. No heat exchanger or temperature controls. Sound good? It is. It's DRYVac™ !

*For more than three decades you have had too few choices in vapor recovery technology. You could choose carbon adsorption/absorption or refrigeration. The choice became harder as the industry learned the downsides of both. But now, you have a new choice. DRYVac™ ... a completely DRY system that's simply better!*

#### SAVE 30+% ... FOREVER!

We didn't stop at “SIMPLER”. We made it better, too! DRYVac™ is at least 30% better when it comes to horsepower, and you know that horsepower translates to kilowatts of electricity. By reducing your electrical usage by 30% DRYVac™ saves you energy you can use elsewhere ... like that new loading pump you want to add. Or, it might just keep you from having to spend big bucks on a sub-station enlargement! Saving 30% is a good thing, for sure!

#### SMALLER IS BETTER

Space is tight in most terminals. There's just never enough room to do everything you want to do. When it comes to enlarging your Vapor Recovery System, DRYVac™ helps you because it's smaller. It will fit right where the old unit is! No enlargements necessary! Smaller IS better!

#### SMARTER SOFTWARE

Software is the key to efficient operations in the 21st century. Ours isn't a carryover from decades past. It's fresh, new, modern, and much more efficient. It was written to cut energy costs at every opportunity ... to run smart instead of hard!

#### BETTER CARBON

It's the activated carbon that does the work of capturing hydrocarbons in a vapor recovery unit. But are all carbons the same? NO!! Not by a wide margin. Our specialty FloMax™ coal-based carbon outperforms all others without sacrificing the heat-up advantages of most modern coal-based carbons. Ours is 30% more dense, so 30% more pounds fit in the same carbon beds for more capacity! It also reduces pressure drop by 8-10” of water column, and has a much longer life! FloMax™ IS better!
