IT'S TIME ... TO SAVE ENERGY

Energy Savings Upgrades for Vapor Recovery Systems

Reality Check

- Old software and dumb controls cost you big money.
- Software & technology upgrades renew economic value.
- New instruments cost less, work better, and do more.
- This package saves energy and money ... up to 60%!
- Guaranteed results. A money back guarantee!!

Date: 9/1/2005

SMC UPGRADE PACKAGE

NOW YOU CAN HAVE YOUR CAKE AND EAT IT TOO!

It's a familiar story ... your existing system runs all the time, chewing up energy by the ton. Software upgrades to ease the pain threaten you with carbon heat-ups. You're just plain stuck! Or, so you thought! Now, at last, you can upgrade with confidence and achieve the meaningful energy savings you want with no downside. We call it SMC. You'll call it "amazing"!

SYSTEM MANAGEMENT CONTROL

Why upgrade? Your system works! Right?

Sure! But it's a little like that old dinosaur computer in your attic; the one with Word Perfect and DOS. It works too, at least sometimes, but it's so out of date that it is just too wasteful to use it. That's why you bought the new Pentium model you have now ... the one with Windows XP.

You existing Vapor Recovery system is like that old XP computer. The software is old and obsolete, The instrumentation barely goes beyond the basics. It works, but it is so inefficient it's embarrassing. It's also costing you big money each and every year to operate and maintain. What to do?

Well, now you can do something about it. And, It won't cost you an arm and a leg. Interested? Please read on!

We can help you make that old dinosaur run like a well oiled machine.. The software in our SMC Upgrade Package takes signals from our Inlet Instrument Package so it knows what your system needs. When it needs to run, it runs. When it doesn't need to run, it shuts itself off ...

without any fear of heat-up problems! When you load more diesel, it knows to pull a deeper vacuum to remove those heavier hydrocarbon fractions, extending the life of your carbon indefinitely. When you load more gasoline it knows you need more purge air to sweep the carbon and eliminate hydrocarbon emission spikes. And, if it's been idle so long it predicts a potential heat-up, it automatically regenerates itself. It's smarter than smart. 21st Century smart!

Save Hundreds

Price: \$64,950.00

Annual Payback:: 30-60% of Total Operating Costs.

Payback:: Less than two years.

Income over life of equipment: \$750,000.00 or more, Guaranteed!

SMC Upgrade Package

Here's what's included:

- One Inlet Vapor Instrumentation Package with One Vortex Shedding Flow Meter, One 0-100% Hydrocarbon Analyzer, and One Temperature Transmitter.
- One ESP Software Package Tailored to Your Operation.
- One Computer Controlled Variable Frequency Drive for your Vacuum Pump.
- One New Inductance Duty Motor Matched to your Vacuum Pump Horsepower Requirement.
- Turnkey Installation.
