

## **WORLD LEADER**

SYMEX Americas™ is a world leading supplier of the latest hydrocarbon vapor recovery technologies. These technologies stop air pollution by recovering hydrocarbons before they are released to atmosphere.

## **RAPID RETURN ON INVESTMENT**

Since pollutants are recovered, they can be returned to storage where they have economic value. The value of recovered products often pays for SYMEX Americas systems in less than three years.

## **SIMPLIFIED DESIGN**

Breakthrough technologies include the DRYVac™ dry vacuum compressor system allowing the complete elimination of all wet chemicals used in vapor systems with liquid ring vacuum pumps. This simplifies the system by also eliminating the glycol heat exchanger, glycol storage vessel, storage level controls and alarms, glycol temperature controls, and the glycol circulation system.

## **DRY IS BETTER**

Nearly all vapor recovery systems in the past were designed to use wet vacuum pumps. DRYVac™ breaks the wet tradition, providing for a totally dry vapor recovery system.
